

Automobile water temperature sensors,chip

Product No.: NSC*

Automotive internal temperature sensor is the water temperature sensor, the lower temperature is, the greater the resistance; The smaller the vice resistance, installed in the engine cylinder or cylinder head water jacket, direct contact with cooling water. Which side of the engine cooling water temperature.

汽车水温传感器的内部是汽车水温传感器，温度愈低，电阻愈大；反之电阻愈小，安装在发动机缸体或缸盖的水套上，与冷却水直接接触。从而测得发动机冷却水的温度。

Features:

- ◆ No lead
- ◆ High sensitivity
- ◆ High compatibility and stability
- ◆ Operation temperature range $-40 \sim +125^{\circ}\text{C}$
- ◆ Resistance tolerance: $\pm 3\%, \pm 5\%, \pm 10\%, \pm 15\%, \pm 20\%$

Applications:

- ◆ widely used in automobile, shipping, armored car, combustion engines, oiliness transformer.
